ECO FRIENDLY *Service Kit*

As part of our commitment to sustainability and guided by a **Sustainable by Design** approach, we've significantly replaced plastic bags with eco-friendly packaging in our Service Kits.

Our logistics team has successfully reduced plastic, replacing it with paper-based materials — **now made with 90% paper**, a tangible move towards more responsible packaging and a lower ecological footprint. Customers will progressively receive their Service Kits in this optimized and sustainable format, marking a true green milestone in our operations. This initiative reduces waste and makes our packaging more sustainable — designed with the future in mind.

A small change,
a big step for sustainability!
